The ARIX Cannulated Screw System is intended for use in internal fixation, reconstruction, or arthrodesis of small bones including the fore, mid- and hind foot and ankle.

The ARIX Cannulated Screw System is intended for use in internal fixation of the bones of hand and wrist. Examples of these procedures may include but are not limited to replantation, lag screw techniques, joint fusions, corrective osteotomies, and the treatment of fractures.

Features and Benefits

Titanium Alloy Material

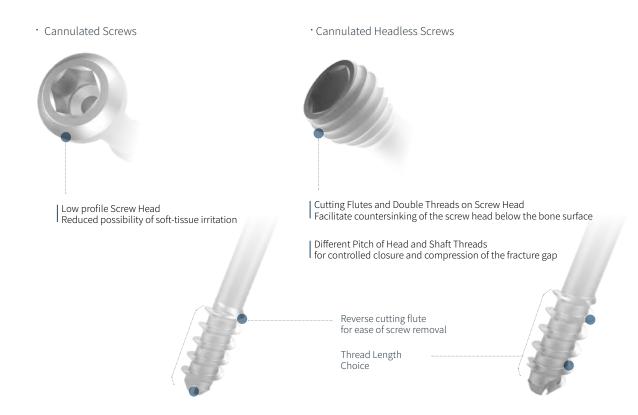

Biocompatible, corrosion-resistant and non-toxic in a biological environment.

Thread Length Choice

For best fit of distal threads into far bone fragment to bear increased interfragmentary compression.

Self-Tapping Flutes

Reduced OR time by eliminating the need for tapping.

Surgical Technique

Surgical Technique

Scaphoid (2.3 Cannulated Headless Screw)

Guide Wire Insertion

- · Insert the guide wire through a drill guide.
- · Check the insertion depth of the guide wire by using the C-Arm
- · Remove the drill guide and check the position of the guide wire and bone reduction status with the C-Arm.

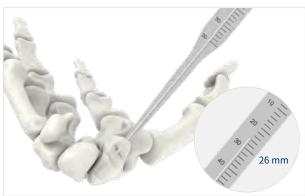

2 Drilling

· Drill up to far bone fragment with the cannulated drill bit.

3 Depth Measurement

· Insert the depth gauge over the guide pin to read the screw length at the position of the guide pin tip.

Required Instruments

Drill Guide 111-093

Guide Pin 111-068-1

Drill Bit 112-23-702

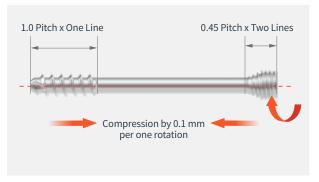

Depth Gauge 111-061

4 Screw Insertion

- Select a screw with the same length as the length read with the depth gauge. Insert the screw over the guide pin with the screw driver.
- \cdot Remove the guide pin when the screw is completely inserted.
- The ARIX 2.3 cannulated headless screw causes compression between the bone fragments due to the difference in pitch of the threads located in the screw head and shaft. Compression distance 0.1 mm per one rotation.

Screwdriver Shaft 113-HF-608

Screwdriver Handle 111-063

Subtalar Arthrodesis (6.0 Cannulated Screw)

Guide Wire Insertion

• Place a drill guide at the desired insertion position and insert the guide wire to the desired depth while checking the position through C-Arm.

2 Countersinking and Screw Depth Measurement

- Countersink with the countersink drill bit after removing the drill guide.
- \cdot Measure the required screw length with the depth gauge.

CAUTION: Do not use power tools during countersinking to prevent excessive bone loss.

Required Instruments

Drill Guide 111-059

Guide Pin 111-068-4

Drill Bit 112-60-601

Cannulated Countersink Drill Bit 111-072

3 Pre-Drilling and Screw Insertion

- · Drill over the guide wire with the 4.8 mm cannulated drill hit
- · Select a screw with the length read through the depth gauge, and insert it over the guide pin.
- \cdot Insert the screw until the head of the screw is completely seated in the bone.
- If it is osteoporotic bone or the cortex is thin, then the washer can be used to increase the surface area of the screw head (in this case, do not use countersink drill)

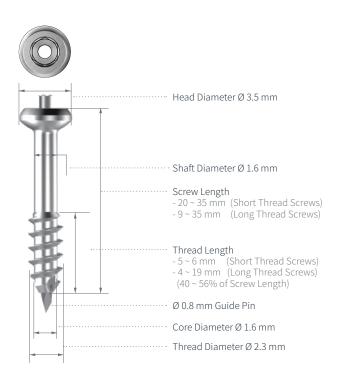

Compression Washer 111-069-2
